Under the Guidance of,

Chittaranjan Ghosh.

Technical -Trainer

EduBridge

(Digital Academy – Certification program in Java Full Stack)

INTRODUCTION:

The projects while learning a programming language is really fun and exciting. We are going to make a simple Tech Blog project using Spring Boot REST Api. It's possible to make a complete functional blog project and GUI in java. In our simple Tech Blog project, the user can see post, comment .But to add post, add comment, update post, update comment they have to first signup and signin to the user account.

MODULES:

- 1. **Admin Module •** In Admin module, the admin can check the users account, post, comments and the admin can manage users, manage posts, manage comments for the existing account of the user.
- 2. **User Module** In User module, the user can view the post, comment of the posts. And the user need to add the new post and comment, they must to signup and signin their account to further proceed in the application.

I have developed this Application in Java, JSP, Servlets, Hibernate and MySQL. It's a web-based projects so I have used HTML, CSS, JavaScript and Bootstrap, Thymleaf.

The main objective of the Tech blog is to view the post and comments of the Tech category like Java, Python, C, C++, Data Science etc... When the user need to add the new post and add comment for the existing post, they must have to signup the account .Now the user can do add post, add

comment. And they can update post their own post in available category. In Admin module, admin can add more category in the website. Admin can only see the admin page and the user have do any vulgur comments and posts, the admin can remove from the account.

SOFTWARE REQUIREMENTS:

• **Frontend**: Java/J2EE technologies (Servlet, JSP), HTML, CSS, JavaScript, Bootstrap, Thymleaf, Hibernate.

• **Backend** : MySQL Workbench 8.0 C E.

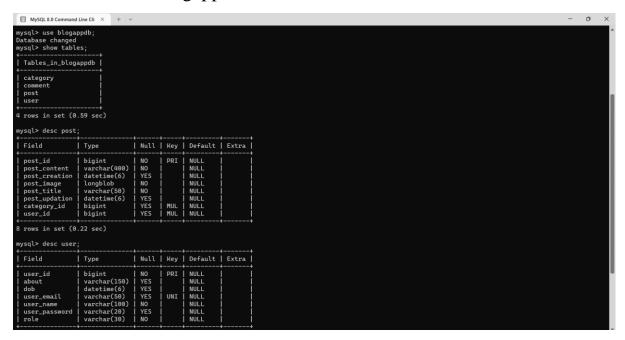

• **Middleware/ Server :** Apache Tomcat v8.5. IDE: Spring tool suite for

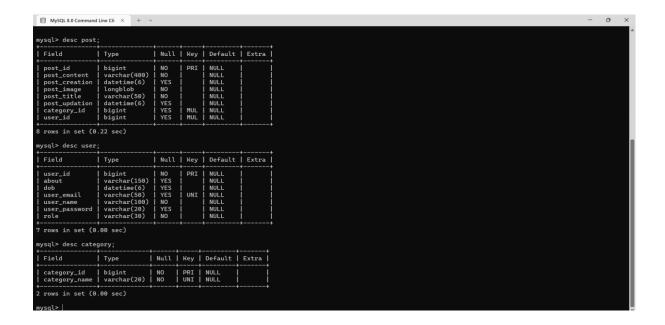

• Java EE Developers

BrowserOperating system: Google Chrome: Windows 11

MySQL - Data Dictionary:

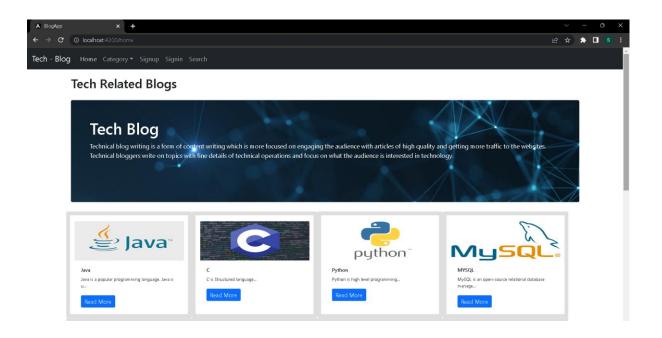

• Create database blogappdb
